Introduction

Purpose of the Guidelines

These Guidelines provide instructions for proponents on how to prepare an Environmental Effects Report (EER) for an activity being assessed in Tasmania by the Board of the Environment Protection Authority (the Board). An EER is a document that provides information about the environmental impacts of the proposed activity and the proposed mitigation measures. The Board uses the EER as a 'case for assessment', to assess the environmental impact of an activity, as required under the *Environmental Management and Pollution Control Act 1994* (EMPC Act).

Guidelines will be adapted for each proposal, where Part B and Part C include project-specific information requirements. The EER must be prepared in accordance with the project-specific Guidelines, which are issued under section 74(4) of the EMPC Act.

The EER will be advertised during the public consultation period and remain publicly available on the EPA website. After consultation, the proponent may be required to supply additional information in response to public and government agency submissions. This generally takes the form of a Supplement to the EER.

Further information is available on the [EPA Assessment Process](#)¹ website.

Preparing an EER

The EER should contain five parts as follows:

- Part A – information about the proponent.
- Part B – information about the proposal, site and area.
- Part C – information about potential environmental impacts.
- Part D – description of the proposed management measures.
- Part E – description of any public consultation undertaken.

Other relevant information, such as survey reports, should be attached to the EER as appendices.

The EER must be typed, A4 sized and submitted electronically (in a searchable format). All images must be of high quality, have a descriptive caption, and be capable of being easily copied and pasted into other documents such as a permit (i.e., all objects should be 'grouped'). All maps, plans, and aerial photographs must be oriented in the same direction as far as practicable and include a north arrow and scale.

The content of the EER should be prepared using a risk-based approach. The level of detail provided on each issue should be appropriate to the level of significance of that environmental issue to the proposal. Not all issues nominated in these Guidelines will have the same degree of relevance to the proposed activity. Depending on the nature of the proposed activity and its location, some of the issues may be more relevant than others, while others may not be applicable at all.

Where the proposal is for a modification of the activity, the EER must provide a case for assessment of the entire activity as modified.

¹ Available at <https://epa.tas.gov.au/assessment/assessment-process>

Planning Information

Where the proposal is subject to a permit under the *Land Use Planning and Approvals Act 1993* (LUPA Act), information required solely for the purpose of assessment under the relevant Planning Scheme should be supplied to Council either:

- as a separate response to an additional information request from Council under section 54 of the LUPA Act, where the planning application has commenced the environmental assessment process; or
- where it forms part of a combined planning and Environmental Effects Report, distinguished from information supplied for the purpose of the Board's assessment.

Commonwealth legislation

The Commonwealth Government may also have a role in the environmental assessment and approval of the proposed activity. Approval under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) is required for an action which is on Commonwealth land or is likely to have a significant impact on a matter of national environmental significance.

Information on the EPBC Act can be obtained from the [Australian Government Department of Climate Change, Energy, the Environment and Water](#) website², or by calling 1800 803 772.

The EER must include a statement on whether Commonwealth approval is likely to be required.

Environment Protection Authority Contact

For information about the assessment process, contact the Environmental Assessment Branch:

GPO Box 1550

Hobart, Tasmania 7001

Telephone: 0427743988

Email: assessments@epa.tas.gov.au

Website: www.epa.tas.gov.au

At least one draft of the EER should be submitted for review prior to formal submission to the Board. This should be emailed or file shared to assessments@epa.tas.gov.au and your nominated contact officer.

² Available at <https://www.dcceew.gov.au/environment/epbc>

Content of EER

Part A – Proponent Information

Provide the following information regarding the proponent:

Proponent entity name	(Consistent with any intended or current permit application for the activity under the LUPA Act)
Proponent trading name	
Registered address of proponent	
Postal address of proponent	
ABN/ACN of proponent	
Contact person's details	Name Telephone number Email address
Consultant's details	Name Telephone number Email address

If a different entity will operate the activity after construction, provide similar details for that entity also.

Part B – Proposal Description

Where the proposal is subject to a permit application under the LUPA Act, the proposal description and specification of the site must be consistent with the intended or current permit application. Any works or activity that are for the purpose of the proposal (e.g., access works) must be included. If the proposed activity is associated with an existing activity (an intensification, expansion, or modification), provide details of any current regulatory approvals (permit, licence, environment protection notice, mining lease, etc.) relating to the existing activity.

I Description of proposed activity

Complete the following tables and provide additional text, diagrams or flowcharts as required.

Proposed Activity

Activity	Provide a general description of the proposed activity, including the classification of the activity under Schedule 2 of the EMPC Act. Describe: <ul style="list-style-type: none"> • The landfill, including design, liner and how it was constructed. • Details of filling sequences at the landfill. • The leachate collection and treatment system. • The stormwater management infrastructure. • The waste disposal and cover systems including maintenance procedures to ensure proper functioning of landfill. • The landfill gas management system.
New or existing?	<ul style="list-style-type: none"> • State if this is an intensification or modification of an existing activity or a new activity. • Describe any planned or projected changes to existing landfill operations as a result of the proposed increase in height.
Product or purpose	Describe the product or purpose of the activity.
Maximum quantity/limit	State the intended activity production capacity or limit/s, with respect to the activity type listed in Schedule 2 of the EMPC Act.
Method/s	State the method(s) of operation and the main items of equipment involved. Provide a diagram or flowchart below if necessary.
Industry standards	Detail any industry standards or guidelines applicable to the activity.
Transport	Describe the proposed transport route (can refer to figures), vehicle types, number of vehicle movements (per day), and time of day of vehicle movements.
Stockpiling	State any materials that will be stockpiled on site.
Area of disturbance	State the total area of land to be cleared for the proposal, in hectares.
Major equipment	List all existing and proposed plant/machinery and other temporary or permanent equipment (distinguish between existing and proposed).
Infrastructure	List the existing and proposed buildings, structures, access roads, internal haul roads, etc. (distinguish between existing and proposed).
Proposal timeline	State the key proposal timeline(s) and forecast life of the activity. Provide details of the expected timeframes for continued operation of the landfill, and projected final closure timelines given the proposed increase in height of the existing landfill area.

Operating hours	State the proposed operating hours and days.
------------------------	--

Location and planning context

Location	State the address of the site, and CTs and PIDs (as applicable) for all titles on which the activity will take place.
Planning Permit	Confirm whether a Planning Permit is required under the LUPA Act. As an appendix, provide written advice from Council stating the requirement, if a planning application has not already been lodged.
Land zoning and tenure	Describe the land zoning and tenure of the site and surrounds. If rezoning of the site is required, provide details.
Use Class and Permissibility	If a permit is required under the LUPA Act, state the Use Class and Permissibility of the activity under the relevant Planning Scheme.

Description of site and surrounds

Land use	Describe the land use of the site and surrounds, distance to the nearest residences, and any nearby conservation reserves or recreation areas.
Topography	Describe the topography of the site and surrounds.
Climate	State the annual rainfall, average temperatures, and predominant wind direction (provide wind roses if possible).
Geology	Describe the geology of the site, including the likelihood that potentially acid forming (PAF) material will be found on site. Describe any geoconservation values on or near the site (e.g., karst).
Soils	Describe the soils on the site (including erodibility), and state whether there is potential to encounter acid sulphate soils and/or contaminated soil.
Hydrology	Describe the waterbodies (surface and groundwater) and aquatic values on site and in the surrounding area. State the distance from the activity to the nearest waterbody.
Natural Values	State the vegetation types on and near the site. List the threatened fauna, flora and vegetation communities known to occur on or near the site (use the Natural Values Atlas, TASVEG 4.0 ³ or results of a relevant survey).

2 Maps and site plan/s

To enhance understanding of the proposal, spatial information should be presented in maps, plans, diagrams and photographs. These must be of high quality and reproducible in monochrome with all text and relevant features clearly visible. Maps and plans should include a north arrow and scale. When spatial data (including maps, plans, grid coordinates and heights) are provided or referred to, the coordinate reference system must be specified. At a minimum, provide the following:

- **General Location Map** (1:25,000 or other suitable scale), showing the site, the nearest residences in other ownership, other sensitive uses, and residential zones within 1.5 km of the proposed activity and within the applicable attenuation distance⁴, and the transport route(s) to and from the activity.

³ Both can be accessed at: <https://www.naturalvaluesatlas.tas.gov.au/>

⁴ Refer to relevant planning scheme or State Planning Provisions

- **Map of the Land** on which the activity will take place and its boundary; by means of mining lease, land title information, map coordinates or other. The Land as defined by this figure must be consistent with any permit application submitted under the LUPA Act (i.e., the Land cannot extend beyond the land titles referenced in the permit application). This figure may be combined with the Site Plan. The boundary of the Land should also be provided to the Board in a geospatial vector format (shapefile or DXF).
- **Site Plan(s)** showing:
 - The boundary of the site.
 - The location of existing and proposed buildings/structures and plant and machinery.
 - The location of product, overburden, soil, and waste stockpiles.
 - Watercourses on and near the site.
 - Site water management (drains, settling ponds, bunding and monitoring points, as relevant) including detailed plans and description of leachate management system and drainage.
 - Vegetation types, clearly marking areas to be cleared, and records of any threatened species/vegetation communities.
 - The location of any significant earthworks.

3 Project rationale and alternatives

- Explain the rationale for the proposal.
- Evaluate the benefits and disadvantages of any alternative options that have been considered.

4 Existing activity

- As the proposed activity is associated with an existing activity, provide the following information in relation to the existing activity:
 - A summary of environmental monitoring results.
 - A summary of public complaints regarding the activity (received by the activity operator and by regulatory authorities).
 - Details of breaches of conditions of current regulatory approvals (if any).
 - Details of contraventions of environmental law (if any).

Part C – Environmental Impacts and Management

The EER should evaluate all potential impacts of the proposal, with the level of detail provided on each issue reflecting its level of significance. For each issue, describe how the impact assessment has been performed (for example, surveys or desktop studies). Describe the existing environment in relation to the impact, including the vulnerability of the potentially affected environment. Clearly articulate the potential impacts, identifying plausible worst-case scenarios and the reversibility of the impact. Then, describe the management or contingency measures proposed to avoid, mitigate, or offset potential adverse impacts. Detail any specialist recommendations which have or will be implemented or justify otherwise. Finally, analyse how and to what degree the impacts will have been avoided, minimised, or offset, and any residual impacts.

Information from documentation relating to the existing activity (such as an Environmental Management Plan or survey reports) may be used or referenced in this EER, provided the information is current.

I Air quality

- Discuss the potential for emissions to air (including odour and dust) from the proposed activity to cause environmental nuisance or harm on the local and regional air environment during construction and operation stages.
- A map of the location of all potential sources of atmospheric emissions (from arrival of waste material, activity on the site, storage, handling, and transport of material on and off site, maintenance) from the proposed development. The map should include but not be limited to roads, disturbed areas, storage heaps, machinery, the leachate management system.
- Describe each potential source of emissions (i.e., point or fugitive) including the likely composition (i.e., types of constituents including odour and dust), approximate quantities, frequencies, and rates of emissions to the atmosphere that may arise from construction, and operation and maintenance of the facility. Particular attention should be paid to emissions from controlled waste handled at the site (like asbestos or sanitary waste).
- Describe the potential for landfill gas generation and measures to manage any gas likely to be generated.
- The identification of all sensitive receptors in the vicinity of the proposed activity (include a map of their locations).
- An assessment of the potential for emissions to air from the proposed activity to cause environmental nuisance or harm at or beyond the site boundary. Include environmental impact of the facility during construction activities and operation of the landfill. The assessment should cover a variety of conditions including emissions under normal operations and upset conditions.
- Discuss the measures to be implemented to mitigate any air emissions that may cause environmental nuisance or harm at or beyond the site boundary. Management of emissions associated with the operation of the facility in adverse weather conditions should also be described.
- A description of Accepted Modern Technology (AMT) for reduction of unavoidable emissions applied on the site.
- A demonstration that the proposal is consistent with the requirements of the *Tasmanian Environment Protection Policy (Air Quality) 2004* and any supplementary documents.

2 Water quality (surface, discharge, and groundwater)

- Identify and characterise all liquid emissions which could arise from the proposal.

- If discharge to the environment is proposed, describe the nature of the receiving environment (e.g., downstream waterways) and likely impact of the discharge.
- Describe the potential impacts of the activity to the receiving environment (surface water, groundwater, drinking water, stock water, and irrigation, as relevant).
- Will surface water from the site drain to a river, creek, wetland, or estuary? If so, provide details about potential impacts and how they will be managed, such as sediment settling ponds. Consideration should be given to management of surface water runoff using water sensitive urban design principles where applicable. Further information is available from the Derwent Estuary Program⁵.
- Describe the waterbodies and aquatic values on site and in the surrounding area, including relevant Protected Environmental Values as per the *State Policy on Water Quality Management 1997*: <https://epa.tas.gov.au/environment/water/pevs-for-tasmanian-surface-waters>
- State the distance from the activity to the nearest waterbody.
- Will the activity result in discharge of liquids (including to sewer)? If yes, provide details of the nature of the discharge (estimated volume and characteristics).
- If discharge to sewer is proposed, provide details of the associated trade waste agreement.
- Where available, provide water quality data describing the downstream environment.
- Provide details of any proposed effluent treatment.
- Provide details of any current and proposed water monitoring activities.
- Provide a water balance/budget to address leachate generation during winter months to prevent the offsite discharge of leachate. Demonstrate the adequacy of the leachate collection and treatment system for both the current and increased height. Detail any additional leachate management infrastructure that may be required to increase the capacity of storage during winter months.
- Provide a Groundwater Management Plan. Due to existing monitoring results for Nitrogen compounds and the bedrock beneath the site (Cambrian Tyndall Group – Mount Read Volcanics, mainly volcanoclastic conglomerate and sandstone with minor mudstone) acting as a natural source of metals in groundwater (from sulphide hosted minerals), an up-gradient groundwater monitoring bore should be considered in the Groundwater Management Plan to monitor groundwater quality to the south of the landfill footprint (for comparison against existing groundwater monitoring results).
- Demonstrate that the proposal is consistent with the requirements of the *State Policy on Water Quality Management 1997* and any supplementary documents.

3 Noise emissions

- Will the activity include fixed or mobile equipment that emits noise? Describe all noise sources, including the size and sound power level, noise attenuation and hours of operation for each main piece of equipment.
- Provide a map of the location of all major sources of noise and any noise sensitive premises⁶ within 1 km of the boundary of the Land.

⁵ Available on the internet at: <http://www.derwentestuary.org.au/index.php?id=31>.

⁶ 'Noise sensitive premise' is defined as: residences and residential zones (whether occupied or not), schools, hospitals, caravan parks and similar land uses involving the presence of individual people for extended periods, except in the course of their employment or for recreation.

- Describe the potential impacts of noise generated by the activity.
- Evaluate the potential for the activity to create a noise nuisance, taking into consideration the:
 - Distance to nearest residences and other noise sensitive premises.
 - Hours of operation.
 - Topography.
 - Site layout showing locations of activities (refer to the Site Plan).
- Describe the noise attenuation measures that will be implemented.
- A demonstration that the proposal is consistent with the requirements of the *Environment Protection Policy (Noise) 2009*⁷ and any supplementary documents.

4 Natural values

- Provide records from the Natural Values Atlas and TASVEG 4.0⁸ of any listed threatened flora/fauna species or threatened vegetation communities on or near the site. If any are present, or if the site has potential habitat for any such species, a detailed survey is likely to be required and the results should be presented in the EER.
- Provide details and results of any flora or fauna surveys undertaken on the site. Surveys must comply with the requirements of the *Guidelines for Terrestrial Natural Values Surveys related to Development Proposals*⁹ and any relevant species-specific guidelines. The survey report must be appended to the EER.
- Detail any proposed clearing or disturbance of native vegetation or potential habitat for native fauna as part of the proposal, including details of the nature of vegetation and habitat values to be cleared or disturbed, and the area of vegetation affected (in hectares).
- Describe the potential impacts to threatened fauna, flora, and vegetation communities, taking into account:
 - The clearance or disturbance of native vegetation or other potential habitat. Provide details of the vegetation and habitat values to be cleared or disturbed, and the area to be affected, in hectares.
 - Movement, noise, or lights during sensitive avifauna breeding seasons.
 - Roadkill from vehicles¹⁰.
- Describe the potential impacts to geoconservation sites (e.g., karst systems), aquatic or riparian environments and other natural values, and the management measures proposed to mitigate these impacts.
- Describe the management measures that will be implemented to mitigate or avoid impacts to threatened fauna, flora and vegetation communities or other natural values.

⁷ Available on the EPA website at [https://epa.tas.gov.au/policy/statutory-policies/state-policies-and-environment-protection-policies/environment-protection-policy-\(noise\)-2009](https://epa.tas.gov.au/policy/statutory-policies/state-policies-and-environment-protection-policies/environment-protection-policy-(noise)-2009)

⁸ Both can be accessed at: <https://www.naturalvaluesatlas.tas.gov.au/>

⁹ Available at: <https://nre.tas.gov.au/conservation/development-planning-conservation-assessment/survey-guidelines-for-development-assessments>

¹⁰ Information on roadkill risk for Tasmanian Devils is available at: <https://nre.tas.gov.au/Documents/Devil%20Survey%20Guidelines%20and%20Advice.pdf>

5 Weeds, pests, and pathogens

- List the weeds¹¹, pests and pathogens occurring on or near the site.
- Evaluate the potential for the activity to introduce or spread weeds and diseases to, from and within the site.
- Discuss the proposed management measures for controlling current weed infestations (e.g., on the northern slope of the central landfill cell) and preventing the spread of weeds, pests, and pathogens (e.g., vehicle washdown procedures). Further information can be found at [Weed and Disease Planning and Hygiene Guidelines | Department of Natural Resources and Environment Tasmania \(nre.tas.gov.au\)](#).

6 Waste

- Describe the solid and liquid waste that will be produced by the activity (e.g., Potentially Acid Forming material, metal, and machinery service wastes, used oils, general refuse).
- Describe the proposed methods for avoidance, reuse, recycling, treatment, and disposal of waste.
- Describe the proposed methods to prevent the escape of any litter, including in circumstances of high wind or if extreme weather is predicted.

7 Environmentally hazardous substances

- Detail the nature and quantity of any environmentally hazardous substances¹² that will be stored (permanently or temporarily) and/or handled on site. This includes fuels, oils, waste, and chemicals.
- Describe the storage method and location of any environmentally hazardous substances and discuss the proposed management measures to prevent release and respond to accidental spills (e.g., provision of spill kits).
- Identify any dangerous goods¹³ and controlled wastes¹⁴ that will be present on the site, with reference to standard classification. Detail how they will be managed.

8 Site contamination

- Has the site on which the activity is to be located been used in the past for activities which may have caused soil or groundwater contamination? If so, provide details. Include details of any assessments of soil or groundwater contamination on the site.

9 Environmental impacts of traffic

- Provide details of the vehicle types, number of vehicle movements, times of movements and route(s).

¹¹ Plant species declared as a weed under the *Weed Management Act 1999*.

¹² 'Environmentally hazardous substance' is defined as: any substance or mixture of substances of a nature or held in quantities which present a reasonably foreseeable risk of causing serious or material environmental harm if released to the environment.

¹³ As defined in the Australian Code for the Transport of Dangerous Goods by Road and Rail.

¹⁴ Information on controlled waste identification and classification is available at: <https://epa.tas.gov.au/business-industry/regulation/waste-management/controlled-waste>

- Evaluate the potential for transport to and from the site to cause a noise nuisance to residences and other noise sensitive premises in proximity to the Land, considering the type, volume and time of traffic associated with the proposal.
- Evaluate the potential to cause a dust nuisance as a result of traffic in proximity to the Land.
- Will the activity result in a night-time (between one hour before dusk and one hour after dawn) traffic increase of more than 10% on roads in proximity to the Land? If so, roadkill mitigation measures for Tasmanian Devils may need to be addressed. See the *Survey Guidelines and Management Advice for Development Proposals that may impact on the Tasmanian Devil (Sarcophilus harrisii)*¹⁵ for more information.

10 Other off-site impacts

- Does the activity have the potential to generate any other off-site impacts that may affect the amenity of residences or other sensitive uses (such as schools and hospitals)? If yes, provide details. The location of all nearby residences or other sensitive uses must be clearly shown on the area map (see Part B).

11 Monitoring

- Describe any current and proposed environmental monitoring and reporting for the activity.
- Show all proposed monitoring points on the site plan (see Part B).

12 Decommissioning and rehabilitation

- Describe the proposed decommissioning and rehabilitation measures in the event of cessation of the activity.
- Provide details of the planned final shape of the landfill.
- Provide details of the proposed final land use once landfilling has ceased.
- The final capping of the landfill will have the potential to contain landfill gas within the man-made fill. Provide a post closure landfill gas management plan.

13 Greenhouse gas emissions and climate change

- Describe how the proposal will implement best practice environmental management in energy consumption and in transport of materials to and from the proposed activity, to minimise greenhouse gas emissions.
- Discuss the impacts of the proposed activity in relation to Tasmania's climate change strategy¹⁶.
- Describe the potential impacts of climate change upon the proposal. For example, it may be appropriate to plan for more intense storm events, more severe fire weather, long-term sea level rise, etc.

¹⁵ Available at [Devil Survey Guidelines and Advice.pdf \(nre.tas.gov.au\)](http://nre.tas.gov.au/Devil_Survey_Guidelines_and_Advice.pdf)

¹⁶ Available on the internet at: <http://www.dpac.tas.gov.au/divisions/climatechange>

Part D – Summary of Proposed Management Measures

This section should contain a table of the proposed measures for avoiding, minimising, and managing the potential environmental impacts of the proposal (as identified in Part C). These should be written as specific, unambiguous statements of action (see example below).

Table I. Proposed management measures

No.	Proposed Management Measure	Timeframe
1	Design and install a sediment settling pond capable of containing runoff from a 1-in-20 year storm event as described in Part C, paragraph 2.6 [of the EER].	At least 30 days prior to commencement of operations.
2	Develop a solid waste management plan as described in Part C, paragraph 8.4 [of the EER].	Within three months of approval and prior to treatment or removal of any waste.
3	Erect a noise attenuation barrier as described in Part C, paragraph 9.2 [of the EER]	At least 30 days prior to commencement of operations.

Part E – Public and Stakeholder Consultation

- Describe any public or stakeholder consultation that has taken place or is intended (such as with other government agencies, community groups or neighbours).
- Provide details of the outcome or main findings of any community consultation.
- *Guidance on Community Engagement* is available on the EPA website at [Guidance Documents | EPA Tasmania](#).

Appendix A: Other Agency Contacts

In addition to a permit under the LUPA Act and the EMPC Act, there may be other legal requirements to allow your proposal to proceed. These may include other permits, licences, or landowner consent. You may also need to contact other Government agencies to obtain information for the purpose of assessment under the LUPA Act or the EMPC Act.

Your proposal may have been referred to other agencies in the process of preparing Guidelines. Should assessments or approval outside of the Board's responsibilities be required, you should engage with the respective agency to progress them. The following list identifies some of the key agencies you may need to contact.

Conservation Assessments

Department of Natural Resources and Environment Tasmania

Telephone: (03) 6165 4396

Email: conservationassessments@nre.tas.gov.au

Website: www.nre.tas.gov.au/conservation

Purpose: Natural values including flora, fauna, and geoconservation values, or permits to deal with threatened species.

Heritage Tasmania

Department of Natural Resources and Environment Tasmania

Telephone: (03) 6165 3700

Email: enquiries@heritage.tas.gov.au

Website: www.heritage.tas.gov.au

Purpose: Historic cultural heritage, including State-level site listings, impacts and permits as required under the *Historic Cultural Heritage Act 1995*. Where works are proposed in or in close proximity to a heritage place entered on the Tasmanian Heritage Register or likely to be of heritage significance to the whole of Tasmania, and a permit is required under the *Land Use Planning and Approvals Act 1993*, the proposal will be referred to Heritage Tasmania by the planning authority. There may also be additional sites listed under local planning schemes, impacts on which are assessed by the relevant planning authority.

Aboriginal Heritage Tasmania

Department of Natural Resources and Environment Tasmania

Telephone: 1300 487 045

Email: aboriginal@heritage.tas.gov.au

Website: www.aboriginalheritage.tas.gov.au

Purpose: Aboriginal heritage, including desktop assessment, artefact survey requirements, permits and advice.

Parks and Wildlife – Property Services

Department of Natural Resources and Environment Tasmania

Telephone: (03) 6169 9015

Email: PropertyServices@parks.tas.gov.au

Website: www.parks.tas.gov.au

Purpose: Impacts on parks and reserves managed by Parks and Wildlife, or Crown land.

Agriculture and Water

Department of Natural Resources and Environment Tasmania

Telephone: 1300 368 550

Email: Water.Enquiries@nre.tas.gov.au

Website: www.nre.tas.gov.au/water

Purpose: Water licences and works impacting natural waterway flow (e.g., dams or fords).

Transport Services

Department of State Growth

Telephone: (03) 6166 3369

Email: permits@stategrowth.tas.gov.au

Website: www.transport.tas.gov.au

Purpose: State roads, including where any proposal requires works on or access from a State-managed road.

Mineral Resources Tasmania

Department of State Growth

Telephone: (03) 6165 4800

Email: info@mrt.tas.gov.au

Website: www.mrt.tas.gov.au

Purpose: Mining Leases
