

Introduction

Noise can be a significant environmental issue. The level and type of sound can affect work, rest and sleep. A number of Tasmanian agencies and authorities regulate noise, depending on what is making the noise and the time of day it occurs. Because of its impact, noise can be considered an “environmental nuisance” under [section 53 of EMPCA](#)¹. The [Noise Regulations](#)² set out noise levels and hours of operation, to protect people from the impact of noise.

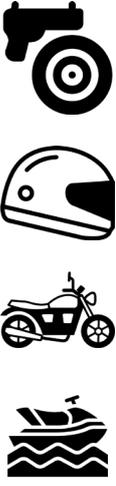

Directing Complaints

	Noise Source A-Z	Who to contact
	Agriculture <ul style="list-style-type: none"> • Electronic bird scarers • Frost fans • Gas guns • Irrigation pumps 	Local Council during business hours W: Tasmanian Council Map and Contacts ³
	Drones <ul style="list-style-type: none"> • Police involvement is limited to situations where drone use poses an immediate danger • Noise Regulations do not cover short term noise nuisance from drones • The Civil Aviation Safety Authority (CASA) focus on air traffic safety breaches, and do not enforce noise or privacy issues 	At the time of printing, no authority manages noise from drones
	Equipment and machinery Examples include: <ul style="list-style-type: none"> • Brush cutters • Chainsaws • Lawn mowers 	Local Council during business hours W: Tasmanian Council Map and Contacts

Frequently Asked Questions

What if I have a noisy neighbour? Or if I'm causing noise?

Often a polite chat with your neighbour can resolve the issue

It is a courtesy to let neighbours know ahead of time that they may expect more noise than usual. For example, if you plan to use a chainsaw or brush cutter near your boundary fence or are hosting a party. Improving a neighbour's understanding and expectations may go a long way to reduce or avoid conflicts over noise.

A polite request to keep the noise down may resolve the issue. People may not know that they are causing irritation or distress until they are told.

The [Noise Regulations](#)⁶ set out noise limits in residential areas (e.g. power tools, musical instruments, chainsaws and sound systems).

If there is ongoing noise, keep a diary of the times and dates so that you have accurate evidence when making a complaint.

If your neighbour speaks to you about noise, try to do what you can to fix the issue to avoid escalation.

What about a noisy heat pump?

Install heat pumps correctly

Property owners, retailers, installers and council officers should be familiar with the noise emission limits in the [Guidelines for heat pumps and air conditioners](#)⁷. Confirm that the outside unit is operating correctly and that it is located sufficiently distant from neighbouring houses to ensure compliance.

How often can gas guns be used?

Gas guns are intended to produce disturbing noise to scare birds away from crops. They should only be used when crops are vulnerable to bird attack. Remember that they don't provide absolute protection.

As a rule of thumb, the greater the separation between the gas gun and the nearest residence, the greater the noise level reduction. Noise levels will reduce noticeably for each doubling of this distance.

As a guide:

- Locate more than 400 m from a residence in a residential, country township, or rural living zone (or similar) and restrict operation to six shots per hour for 10 hours of the day (7:00 am to sunset).

Primary Industry Activity

There is an immunity from prosecution under section 53(5) of EMPCA for 'noise nuisance' emitted from a primary industry activity as defined in the *Primary Industry Activities Protection Act 1995*.

Consideration should first be given to whether the activity is covered by that Act. If it is, then no noise nuisance offence can be pursued under EMPCA, but other regulatory action can be taken – such as the issue of an Environment Protection Notice under section 44 to limit the nuisance being caused.
