Hi Wes, we are organising distribution of Review document for peer review so we get comments back in time for scorecard release.

Are you happy for us to send it out in current form - ie with issues raised recently by industry included where warranted and with Recommendations included? We can alert reviewers to fact that Recommendations will be removed from the public document but it would be valuable to get some confirmation that our Recommendations are on the right track. This will also allow extra time to draft up the to be released document without Recommendations.

Raymond said you had a CSIRO contact in mind for the peer review?

Subject: Draft review document

Andrew, Mark, Peter and Ruben

Following my letter from yesterday, in relation to my intention to release of the draft *Review of Tasmanian and International Regulatory Requirements for Salmonid Aquaculture* today, I advise that I need to delay the release of the draft document. I need to do further reviewing prior to releasing the document. In addition, in publishing a complex and technical document on the EPA website I need to also provide a short, plain English, summary document that meets the Government's accessible information policy. I will advise you in due course when this work is completed. I will progress having the document peer reviewed in the meantime.

Regards

Wes
